Lobsters field run: new results

October 24, 2026, 07:23 IST. Hard stop: 09:46:01 IST. All results use saboteur **0.12.3**, source `6f87ccc98377bf0c23f3cf409006f0464c2aa67c`. EX-1 applies to the measured map/replays: `spec/features/user_administration_spec.rb` excluded through `rspec_args`, field only, no app spec edits. Reason: independent banning-email red at app pin40753644, untouched by selected PRs; issue #2263 relation unverified.

Stage	New measured result / remaining work
Whole-suite map	Built: 749 subjects / 908 tests; two baseline checks and coverage-build pass each908/0. Extra whole-app mutation command stopped at117/11,984, exit130, no aggregate score. Contended by one serial PR-bundle loop.
Map timing	Original reported502.41s retained; timestamp-derived1213.27s stored separately. Cache reports239.47s build_seconds, not verified elapsed. Cause of clock discrepancy OPEN; no timeout-accounting conclusion.
PR #2231, serial jobs1	**4 mutants: 4 killed, 0 survived, 0 timeouts/errors; exit0.** External wall35.85s; tool total35.4s; peak child RSS433,048KiB. Tool score100%, selected tests only. All4 kills are labeled crashes, not assertion kills.
PR #2204, serial jobs1	**22 mutants: 19 killed, 3 survived, 0 timeouts/errors; exit1.** External wall62.65s; tool total61.8s; peak child RSS391,532KiB. Tool score86.4%, selected tests only. Kills:18 assertion,1 crash. Survivors unconfirmed; not yet real-gap findings.
Fake-kill gate	Both received report.json files checked before the scores above: no excluded testFiles or excluded-file killedBy credit; every killedBy ID resolves. rejectedKills=0 in both. This is not independent kill-cause verification. No final map-phase report.json was available for that truncated phase.
Replay scope / setup	2 of5 completed. PR trees use Ruby4.0.0. #2231 earlier setup attempt failed exit3/6.13s because database.yml was missing; retry used a copied pin configuration, an explicit deviation requiring source/hash record.
Parallel / determinism	Not started in received evidence. One jobs2 replay comparison and repeated serial ID/status/killedBy/gap diffs remain.
Independent triage / 10 kills	Pending. Classify every survivor, add killing specs for real gaps, and verify a seeded sample of10 kill causes. No final field verdict yet.

Evidence branch · Historical report · Example-exclusion issue #1344

Limits remain: Landlock ABI2 fallback, live debugger/profiler threads at fork, selected-spec coverage (not whole-suite survivor confirmation), and unresolved map timing. The later85.05s clock probe reportedly aligned wall/monotonic time; it does not explain the earlier discrepancy.
